

The EMFSafeSwitch
is manufactured In America in a
508A UL listed industrial panel shop, is
code compliant & will not jeopardize
home owners insurance. Be safe.

Because flipping breakers
can lead to a failure.

There are the four types of in home EMF
(electromagnetic fields):

Electric Fields +
Magnetic Fields +
Radio Frequency +
Dirty Electricity.

ALL EMF is Cumulative

The best way to reduce EMF exposure
is, whenever possible, simply SWITCH
IT OFF, especially at night. In an EMF
mitigated sleep sanctuary most people
experience better sleep, more energy
& therefore better health.

SLEEP
IS THE FOUNDATION OF
GOOD HEALTH

Mitigating Modern Exposure

EMFSafe®
REMOTE CUT OFF SWITCH
& Optional Whole House "DE" PQFilter

With the push of a button turn any
bedroom, home office, den etc.
into an EMF mitigated safe
sanctuary & LiveEMFSafe

Built to UL standards &
Manufactured by EMFSafe, Inc
www.EMFSafeES.com

#1 Measure

Use a professional or our Body Voltage Kit (BVK) & make an informed decision.

#2 How many circuits

Measure to find which circuits are affecting you and by how much. The Building Biology Institute (BBI) recommends a body voltage reading of below 30mV in the sleep area. Simply turn off breakers till this goal is achieved. Order the right size switch for you.

#3 "NP" / "PO" wiring

"NP" Neutral & Power disconnects the neutral and power giving greater protection from ground effects for EHS people and has greater zone control.

"PO" Power Only disconnects the power only. This is our "economy" switch and can work well for people who are not yet sensitive or on a budget.

#4 PQFilter™

The EMFSafe optional built in Whole House, 24/7 "dirty electricity" (DE), Power Quality PQFilter™ is a capacitive/parallel filter, just like most other popular whole house (& plug in) "DE" filters on the market. It comes in two options: PQ1 for lighter loads (smaller homes, no Solar) & the adjustable PQ2 for heavier loads (larger homes, pool pumps, Solar etc.) Only available in an EMFSafeSwitch. Independent, third party tests showed the EMFSafe PQFilters™ got better results in most conditions than other whole house "DE" filters AT HALF THE PRICE. See results www.LiveEMFSafe.com/filter

#5 Type of Enclosure

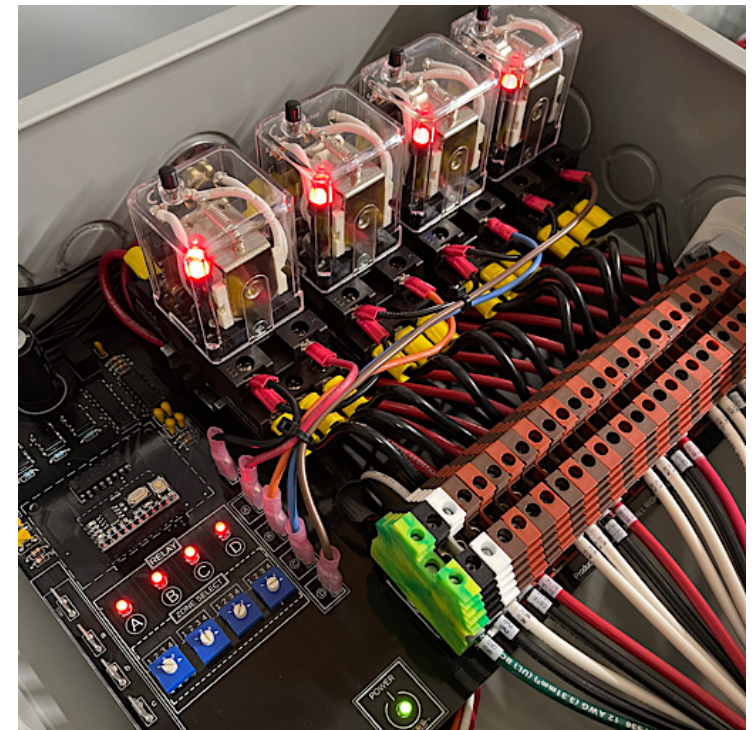

We offer three types of enclosures: Surface mount (on the wall), Flush mount (in the wall) and Outside (weatherproof).

Flex Zones™

Flex Zones™ are exclusive to EMFSafe & allow you the customer to choose which zone you want each relay/ circuit to be controlled by. You can change allocation any time (without an electrician).

Not a kit

Shown NP-4/4 - 4 relays for 4 Neutral & Power (NP) circuits with 4 Flex Zones™. Comes in your chosen enclosure, with "pig tail" of wires ready to install, UL listed (not a kit).

Installation is required by a licensed electrician, time will vary depending on type of enclosure and size of switch. For more information visit our web site: www.LiveEMFSafe.com
